PROFESSIONAL SUMMARY

Results-driven DevOps Engineer with 3 years of experience designing, deploying, and managing production-grade infrastructure on **Google Cloud Platform (GCP)**. Specialized in **Kubernetes (GKE)**, **Terraform**, and **GitOps (ArgoCD)** for high-availability banking and fintech applications. Proven track record of maintaining **99.95% SLA**, reducing deployment times by 40%, and building zero-downtime CI/CD pipelines. Automated cloud operations using Python and Bash, reducing manual effort by 30%.

TECHNICAL SKILLS

Cloud Platform: GCP — GKE, Cloud Run, Cloud SQL, Cloud Storage, Cloud CDN, Cloud Build, Artifact Registry, Cloud Monitoring, Secret Manager, Cloud NAT, Cloud DNS, VPC, IAM, GCR

Containers & Orchestration: Kubernetes (GKE), Docker, Helm, Kustomize, Istio Service Mesh, HPA, Ingress

IaC & CI/CD: Terraform (GCS Remote State Backend), GitHub Actions, ArgoCD (GitOps), Jenkins, UDeploy

Observability & Security: Cloud Monitoring, Prometheus, Grafana, OpenTelemetry, Workload Identity, ESO, Trivy

Scripting & DBs: Python (GCP SDK, Boto3, REST APIs), Bash, Linux Cron, PostgreSQL, MySQL, Redis

PROFESSIONAL EXPERIENCE

DevOps Engineer | LTIMindtree

Banking / Fintech Domain

Sep 2023 – Present

Bangalore, India

- **Microservices Platform on GKE:** Architected a mission-critical Python/FastAPI microservices topology on **GKE**. Optimized cluster scalability using HPA and Topology Spread Constraints for high availability.
- **CI/CD & GitOps Automation:** Engineered a high-throughput pipeline using **GitHub Actions** (Trivy scans, GCR pushes) with automated reconciliation via **ArgoCD**. Enforced fail-fast principles, reducing deployment time by 40%.
- **Security & Service Mesh:** Implemented **Istio Service Mesh** for mTLS and distributed tracing. Enforced Pod Security Admission (PSA) Restricted profile, **Workload Identity**, and External Secrets Operator (ESO) syncing from GCP Secret Manager for zero-trust IAM and zero exposed secrets.
- **Infrastructure as Code (Terraform):** Provisioned GCP infrastructure (VPC, Cloud SQL, GKE) using **Terraform** with GCS remote state backend. Enforced GCP Organization Policies for strict VPC Service Controls.
- **Monitoring & Automation:** Configured **GCP Cloud Monitoring**, Prometheus, and Grafana tracking Golden Signals. Built Python/Bash scripts for health checks, log archival, and resource cleanup, saving 5+ man-hours/week.
- **Cost Optimization:** Implemented Cloud Storage Lifecycle Management (Standard to Coldline/Archive) and automated resource audit scripts for ongoing cloud cost governance.

KEY ACHIEVEMENTS

- **99.95% SLA Maintained** — Sustained high availability for banking-grade platform with zero unplanned outages.
- **40% Faster Deployments** — Decoupled CI/CD stages with GitHub Actions and ArgoCD GitOps.
- **20% MTTR Reduction** — Automated alerting and SRE runbooks reduced incident response time significantly.
- **30% Manual Effort Reduction** — Python and Bash automation eliminated repetitive operational tasks.

EDUCATION & CERTIFICATIONS

- **Google Cloud Associate Cloud Engineer (ACE)** — Google
- **B.E. Computer Science Engineering** | National Engineering College, Thoothukudi

2022
